How to approach Caribbean business owners and present the rank-and-rent offer they cannot refuse
- 6 Scaling — Multiple Sites, Multiple Cities, Compounding Income**
From one \$600/month site to a portfolio generating \$5,000–\$15,000/month passively

INCOME BENCHMARKS

1 site = \$400–\$1,000/month · 5 sites = \$2,000–\$5,000/month · 10 sites = \$4,000–\$10,000/month · sites compound in value every month they rank

The Business Model — What a Website Landlord Actually Does

How rank-and-rent works, the real numbers, and why now.

You build a website. You rank it on Google for a local service search. You forward the calls it generates to a business owner who pays you a flat monthly fee to keep those calls coming. You are not doing the service. You are not running the business. You own the digital real estate that sends the business owner their customers — and they pay you rent every month to keep the door open.

\$600/mo

Average rent per ranked local website · 10 sites = \$6,000/month passive · sites rank higher over time · income compounds without additional work

Why This Model Works for Caribbean Professionals

Caribbean professionals who have lived in their diaspora cities for 20+ years have something no outside competitor can replicate: a deep understanding of the local Caribbean business community and a warm network that gives them direct access to business owners who need exactly what this model provides. You are not approaching a stranger. You are approaching a Caribbean plumber, a Caribbean cleaning company, a Caribbean electrician — someone who already knows your face and respects your credibility.

What you own

The website. The domain. The Google rankings. The phone number that forwards calls. If the current client stops paying, you forward the calls to their competitor and collect rent from them instead. The asset is yours. The client rents access to it.

What makes it passive

Once the site ranks — typically 3–6 months of consistent SEO work — it generates leads without daily effort. A well-ranked site requires 2–3 hours of maintenance per month. Your monthly income from that site requires no additional work beyond keeping the hosting active and the content current.

CARIBBEAN EARNER PRINCIPLE

The Cayman Islands built a global financial industry by creating assets — legal structures, financial instruments, real estate — that generate income independent of the owner's daily labor. Your ranked websites are your Cayman assets. Built once. Rented indefinitely. Income compounding every month the site stays on page one.

Niche and City Selection — Finding Your First Winner

The research that separates a \$600/month site from an invisible one.

Most people who fail at this model fail here — before they build a single page. They choose a niche based on what sounds profitable rather than what the data supports. They choose a city based on where they live rather than where the opportunity exists. This chapter gives you the exact research process that identifies a winnable niche in a winnable city before you spend a single hour building.

What Makes a Niche Profitable

1	High Urgency — The Customer Needs It Today Junk removal, water damage restoration, emergency electrician, auto glass repair, epoxy flooring, spray foam insulation, crime scene cleanup. These are problems people do not comparison shop for at leisure. They search Google and call the first credible result. High urgency equals high conversion rate equals high value to the business owner renting your site.
2	High Job Value — Each Lead Is Worth Real Money A water damage restoration job is worth \$3,000–\$15,000. A spray foam insulation job is \$2,000–\$8,000. An epoxy flooring job is \$800–\$3,000. When each lead your site generates is worth \$1,000+ to the business owner, paying you \$600–\$1,000/month in rent is an obvious investment. Never build sites in niches where the average job value is under \$200.
3	Low Competition — You Can Actually Rank Check the first page of Google for '[niche] [city]'. If the results are dominated by HomeAdvisor, Yelp, Angi, and national chains with thousands of reviews — that niche in that city is too competitive for a new site to crack without significant resources. Look for results showing small local businesses with few reviews and basic websites. Those are the markets you can enter and rank in within 90 days.

4

The Caribbean Community Niche Advantage

Niches that serve Caribbean homeowners specifically — Caribbean home cleaning services, Caribbean catering delivery, Caribbean landscaping, Caribbean electrical in neighborhoods with high Caribbean homeownership — have a double advantage: you rank for the local service AND you have community access to both the business owner clients and the homeowner customers. Build your first sites in niches where your Caribbean community connection accelerates both the ranking and the client acquisition.

Niche	Avg Job Value	Monthly Rent Range	Competition Level
Junk removal	\$250–\$800	\$400–\$700	Low–Medium
Epoxy flooring	\$800–\$3,000	\$500–\$1,000	Low
Spray foam insulation	\$1,500–\$5,000	\$600–\$1,200	Very Low
Water damage restoration	\$3,000–\$15,000	\$800–\$1,500	Medium
Auto glass repair	\$150–\$400	\$300–\$600	Low–Medium
Caribbean home cleaning	\$150–\$400	\$300–\$600	Very Low

Building the Site — Fast, Lean, and Built to Rank

WordPress setup, on-page SEO, and the technical foundation Google rewards.

Your rank-and-rent site does not need to win design awards. It needs to be fast, clear, local, and structured the way Google expects. A \$200 custom design will not outrank a simple well-structured WordPress site built in a weekend. The variables that matter are technical SEO fundamentals, local relevance signals, and page speed — not visual complexity.

1

Domain and Hosting Setup

Choose a domain that includes the service keyword and city: junkremovalbrooklyn.com, brooklynepoxyflooring.com, caribbeanhomecleaningmiami.com. Register through Namecheap (\$10–\$15/year). Host on SiteGround or Cloudways (\$15–\$25/month). Fast hosting is an SEO factor — do not use cheap shared hosting that loads slowly. Your domain and hosting are your most important monthly costs.

2

WordPress Installation and Theme

Install WordPress (one-click through your hosting provider). Install Kadence or Astra theme (both free). Install Rank Math SEO plugin (free). Install WP Rocket or LiteSpeed Cache for page speed (free tier sufficient). Your site is now technically ready. Do not spend time customizing the design beyond choosing a clean professional color scheme and uploading a logo.

3

On-Page SEO — The Five Essential Pages

Home page: H1 tag with exact keyword '[Service] in [City]'. About page: local content mentioning neighborhoods, landmarks, and service area. Services page: detailed description of each service with natural keyword usage. Contact page: name, address, phone number (NAP) matching your Google Business Profile exactly. Blog: 3–5 articles targeting related local search terms. These five pages are all you need to rank a local service site.

4

Build It Fast With Lovable

The fastest way to build your rank-and-rent sites is with Lovable — an AI site builder where you describe the service, the city, and the style you want, and it builds a professional site in minutes. Use Lovable to build the initial site structure, then export to WordPress or use Lovable's hosting for the live site. For a Website Landlord running multiple sites, Lovable cuts build time from a weekend to an afternoon. caribstream.io/lovable

GOOGLE BUSINESS PROFILE — NON-NEGOTIABLE

Create a Google Business Profile for every rank-and-rent site using a virtual address (your home address or a mailbox service) in the target city. The GBP is the most powerful local ranking signal available and it is free. Verify via postcard. Fill out every field completely — business name, category, description, photos, hours. A complete GBP alone can rank your site in the Google Maps 3-pack within 30–60 days of consistent activity.

Ranking the Site — Getting to Page One

Backlinks, citations, Google Business Profile, and the actions that move you up.

Ranking a local service site on Google requires three things done consistently over 3–6 months: citations (consistent NAP across every local directory), backlinks (links from other websites pointing to your site), and Google Business Profile activity (regular posts, photos, and review responses). None of these require technical expertise. All of them require consistency.

1

Local Citations — The Foundation Layer

A citation is any mention of your business name, address, and phone number on another website. Submit your business to the top 50 local directories: Google Business Profile, Yelp, Bing Places, Apple Maps, Facebook, YellowPages, Foursquare, Manta, BBB, and 40 others. Use BrightLocal or Whitespark citation building service (\$50–\$100 one-time) to submit to all directories simultaneously. Consistent NAP across all citations is a primary local ranking signal.

2

Backlink Building — Quality Over Quantity

Three backlink types work for local sites: local business directory backlinks (included with citation building), guest posts on local news or community blogs, and Caribbean community website mentions. For your first site, 10–15 quality backlinks built over 90 days is sufficient to rank in most low-competition local niches. Avoid buying cheap backlink packages — they do not work and can penalize your site.

3

Google Business Profile Activity

Post on your GBP twice per week: a service photo with a caption, a before-and-after image, a community tip related to your niche. Respond to any questions that appear in the Q&A section. Add new photos monthly. GBP activity is the fastest path to ranking in the Google Maps 3-pack — the most visible local search result and the one that generates the most inbound calls.

4

Patience and Consistency — The Real Ranking Strategy

Local sites typically see meaningful ranking improvements at 60 days, significant movement at 90 days, and stable page-one positions at 120–180 days. Do not evaluate the model at 30 days. Do not change your strategy every week. Pick your niche, build the site correctly, do the citations, build 10–15 backlinks, post on GBP twice per week — and wait. The consistency is the strategy.

Finding and Closing Your First Rent-Paying Client

How to approach Caribbean business owners with the rank-and-rent offer they cannot refuse.

You do not need to wait until your site ranks to find a client. Many Website Landlords sign their client before the site reaches page one — showing the business owner the existing rankings, the traffic data, and the trajectory of the site's growth. Caribbean business owners who see a site already appearing on page two of Google for their target keyword understand immediately what page one will mean for their phone.

1

Who to Approach First — Caribbean Community Business Owners

Your first rent-paying client should be a Caribbean business owner in the niche you built your site for. A Caribbean junk removal company. A Caribbean cleaning service. A Caribbean electrician. You have the community access to reach them directly — through Facebook groups, church connections, professional networks, or personal introduction. That warm access closes the deal faster than any cold outreach strategy.

2

The Pitch — Show Them the Data

Walk into the conversation with three things: a screenshot showing your site's current Google position for their target keyword, a Google Search Console or Semrush traffic estimate showing the monthly search volume for that keyword, and a simple calculation of what ranking #1 would mean for their business. 'This keyword gets 400 searches per month in [city]. If 5% of those searchers call, that is 20 calls per month. If you close 30% of those calls at \$500 average job value, that is \$3,000/month in new revenue. I charge \$600/month rent for the site.'

3

The Agreement — Simple and Clean

A one-page Website Landlord agreement covers: monthly rental fee, payment date, call forwarding number, what happens if the client stops paying (calls redirected to a competitor), and a 30-day notice period for either party. Keep it simple. Caribbean business owners who understand that the asset belongs to you and they are renting access — not buying a website — sign quickly when the math is clear.

4

Call Tracking — Prove Your Value Every Month

Set up a call tracking number through CallRail or Google Voice for every site. Forward all calls to your client's number. Every month, send the client a simple report: number of calls received, call duration, and estimated call value. Caribbean business owners who see '23 calls this month, average 4 minutes each' understand immediately that the \$600 rent is one of the best investments in their business. The data makes renewal automatic.

REMOTE OS PRO — RUN YOUR OPERATION

Remote OS Pro manages your Website Landlord client accounts, tracks monthly rent payments, schedules automatic client reports, and sends renewal reminders — keeping your growing site portfolio organized as you scale to 10, 20, and 30 sites. Client management, recurring service scheduling, reporting automation, and invoicing — all in one system. Setup fee \$297 · Software access \$1,999 · \$500/month. No trial. No refunds. All sales final. caribstream.io/remoteOS-7X4k9mQ2

Scaling — Multiple Sites, Multiple Cities, Compounding Income

From one \$600/month site to a portfolio generating \$5,000–\$15,000/month.

The Website Landlord model scales in two dimensions: more niches in the same city and the same niche in more cities. A junk removal site that ranks in Brooklyn can be replicated in Queens, the Bronx, and Newark with 80% of the same content adapted for each market. The skills you developed building and ranking your first site apply to every subsequent site. The compounding income accelerates as your portfolio grows.

1

Site Two — Same Niche, Different City

After your first site ranks and generates consistent rent, build your second site in the same niche in a neighboring city or borough. You already know the niche. You have the content templates. You know the citation sources. Building site two takes 20% of the time site one took. Ranking site two is faster because you understand the process. Month 6: two sites generating \$1,200/month combined.

2

Site Three — New Niche, Same City

Your third site targets a second niche in your original city. You already have the local citations and community relationships. A Caribbean cleaning service landlord site and a Caribbean junk removal landlord site in the same city can share some of the same GBP infrastructure and community promotion. Month 9: three sites generating \$1,800/month combined.

3

The 10-Site Portfolio — Full-Time Passive Income

At 10 ranked sites averaging \$600/month each, your Website Landlord portfolio generates \$6,000/month in passive income. Building and ranking 10 sites takes 12–18 months of consistent work. Maintaining 10 sites requires 10–15 hours per month of GBP posting, citation maintenance, and client communication. The work-to-income ratio at the 10-site level is among the best of any Caribbean Earner business model.

Portfolio Size	Avg Monthly Rent	Monthly Income	Annual Income
1 site	\$600	\$600	\$7,200
3 sites	\$650	\$1,950	\$23,400

5 sites	\$700	\$3,500	\$42,000
10 sites	\$750	\$7,500	\$90,000
20 sites	\$800	\$16,000	\$192,000

CARIBBEAN EARNER PRINCIPLE

Tobago has one of the oldest protected coral reefs in the Western Hemisphere — built over decades through natural compounding that no human effort could replicate in a single season. Your ranked websites compound the same way. Each month they rank, they rank higher. Each site you add compounds your total income. Protect the foundation and let it grow.

Build Digital Real Estate. Collect Rent Every Month. Own What You Build.

Every local business in your city needs more customers. Every niche with high urgency and high job value is an opportunity to build a site that generates those customers on autopilot. The Website Landlord model rewards patience, consistency, and the Caribbean community relationships that give you direct access to the business owners who need what you are building.

YOUR FIRST 30-DAY ACTION PLAN

Week 1 — Research and domain

Run the niche and city research process. Choose your first niche. Register your domain. Set up hosting and WordPress. Install the essential plugins.

Week 2 — Build the site

Build your five essential pages. Set up your Google Business Profile. Submit to the top 20 local citations using BrightLocal.

Week 3 — SEO and content

Write 3 blog posts targeting related local search terms. Build your first 5 backlinks from local directories. Post on GBP twice.

Week 4 — Find your first client

Identify 5 Caribbean business owners in your niche. Approach the first one with your data presentation. Close your first rent agreement.
